SUMMARY

PhD Candidate in AI and Systems. Proven track record of developing scalable learning frameworks for LLMs, Deep-RL agents and time-series models. Work recognized through top-tier publications (CCS, DSN, Usenix Enigma), awards, and patents. Passionate about translating AI research into real-world impact.

EDUCATION

PhD in Electrical and Computer Engineering — University of British Columbia, Canada
Sep 2020 – Present — Advisor: Dr. Karthik Pattabiraman

MASc in Electrical and Computer Engineering — University of British Columbia, Canada
Sep 2018 – Aug 2020 — Advisor : Dr. Karthik Pattabiraman

MS in Software Engineering (BS+MS Integrated Program) — Vellore Institute of Technology, India
Jul 2011-May 2016

AWARDS AND HONORS

- NSF/ACM SIGBED Rising Star Award – 2024 link. (awarded to 40 young researchers worldwide).
- UBC Solutions Scholars Award for interdisciplinary research in AI and climate – 2024.
- UBC President's Academic Excellence Award – 2022-2024.
- UBC Faculty of Applied Sciences Excellence Award – 2018-2024.
- Best paper award at IEEE/IFIP DSN'2021 (flagship venue in the field of Dependable Computing research).
- Master's thesis featured in SERENE-RISC as top ten cybersecurity development in Canada – 2020.
- 4YF Fellowship for doctoral studies at UBC (given to top 10 students in each graduating class) – 2020.
- DAAD Working Internship in Science and Engineering Fellowship – 2015.
- Indian Academy of Sciences Research Fellowship – 2014, 2015 (~120 students selected across India).

RESEARCH EXPERIENCE

Research Assistant at the University of British Columbia, Vancouver, Canada **Sept 2018 – Present**

Doctoral Research: Trustworthy AI (research featured in EurekaAlert, TechXplore, GlobalNews)

- Proposed a **multimodal adversarial training** framework for AI agents that enables robust policy learning while improving safety compliance and minimizing system's disruption under adversarial conditions.
- Proposed a **transfer learning** framework for training Deep-RL policy, using low-dimensional latent state representations. This approach achieved **2X faster** convergence compared to conventional methods.
- Designed a robust **time series** modeling approach that achieves > 90% accuracy in anomaly classifications, with integrated graph-based **causal analysis** for root cause identification.

Machine Learning– Computer Vision

- Proposed methods to detect and mitigate physically realizable **adversarial patch** attacks against DNNs. This method demonstrated **80% reduction** in misclassification in computer vision benchmarks.

Search and Retrieval

- Designed an AI agent using **LLM** and **RAG** to answer environmental science queries by synthesizing insights from climate reports for improved accuracy and relevance – using role-aware prompt generation.

Research Intern at Oracle Labs, Vancouver, Canada **Jul 2022 – Dec 2022**

Research Areas: Large Language Models, Search and Retrieval

- Proposed a pre-training approach to improve **zero-shot performance** of LLMs in code automation tasks.

- Designed an LLM based **recommendation system** that integrates with developer environments to proactively provide ranked and relevant solutions by eliminating the need for manual prompts.
- Work resulted in **two US patent** filings in LLM-based code intelligence and developer productivity tools.

Research Engineer at (ISEC/IAIK) Graz University of Technology, Austria **Jan 2017 – Aug 2018**

Research Areas: Applied Cryptography, End-to-End Confidentiality, Privacy.
Involved in CREDENTIAL EU Horizon 2020 Project. Key contributions are as follows:

- Designed a crypto framework for end-to-end confidentiality (IAIK-JCE extension) in **federated identity management** cloud services. This approach is **used by three services providers** in Germany and Italy.
- Led the efforts in designing approaches for transparent assessment of **GDPR compliance** in cloud services. This work is now used by EuroCloud's StarAudit Certification (StarAudit, CREDENTIAL).
