## RESEARCH EXPERIENCE

**Research Assistant at the University of British Columbia, Vancouver, Canada**

**Sept 2018 – Present**

*Doctoral Research: Trustworthy AI, Embodied AI (research featured in [EurekaAlert](#), [TechXplore](#), [GlobalNews](#))*

- Proposed a **multimodal adversarial training** framework for AI agents that enables **2X faster** policy learning while improving safety compliance and minimizing system’s disruption under adversarial conditions.
- Proposed a robust time series modeling approach to **classify anomalies** in robotic systems. This approach achieves >90% accuracy in differentiating sensor faults and attacks from noise and fluctuations.
- Proposed a **transfer learning** framework for training Deep-RL policy, using low-dimensional latent state representations. This approach achieved **4X faster** convergence compared to conventional methods.

*Research Area: Machine Learning Security*

- Proposed methods to detect and mitigate physically realizable **adversarial patch** attacks against DNNs. This method demonstrated **80% reduction** in misclassification in computer vision benchmarks.

*Research Area: AI for Science and Reasoning*

- Designed an AI agent using **LLM** and **RAG** to interpret and respond to questions on environmental science with a focus on synthesizing insights from climate reports to improve accuracy and relevance of responses.
- Developed role-aware filtering in the AI agent to rank and tailor information based on the users’ profile.

*Security Analysis and Testing*

- Proposed a fuzz testing technique to discover **GPS spoofing** vulnerabilities in swarm control algorithms.
- Highlighted the limitations of **end-to-end encryption** protocols in Industrial Control Systems (ICS), and demonstrated how **side channel leaks** can be exploited to launch active attacks to disrupt ICS operations.

## Research Intern at Oracle Labs, Vancouver, Canada

Jul 2022 – Dec 2022

Research Area: AI for Code, Large Language Models

- Proposed a pre-training approach to improve **zero-shot performance** of LLMs in code automation tasks.
- Designed an LLM based **recommendation system** that integrates with developer environments to proactively provide ranked and relevant solutions by eliminating the need for manual prompts.
- This work resulted in filing **two US patents** in the area of LLM and recommendation systems.

## Research Engineer at (IAIK) Graz University of Technology, Austria

Jan 2017 – Aug 2018

Research areas: Applied Cryptography, End-to-End Confidentiality, Privacy.

Involved in [CREDENTIAL](#) EU Horizon 2020 Project. Key contributions are as follows:

- Designed a crypto framework for end-to-end confidentiality ([IAIK-JCE](#) extension) in **federated identity management** cloud services. This approach is **used by three services providers** in Germany and Italy.
- Led the efforts in designing approaches for transparent assessment of **GDPR compliance** in cloud services. This work is now used by EuroCloud's StarAudit Certification ([StarAudit](#), [CREDENTIAL](#)).
