## RESEARCH EXPERIENCE

### Doctoral Candidate at the University of British Columbia, Vancouver, Canada

Sep 2018 – Present

- Proposed a **multimodal sensor fusion**-based adversarial training framework for **Deep-RL agents**, achieving **2X faster** policy learning and improved safety compliance compared to traditional methods.
- Proposed a **robust time series** modeling approach to **classify anomalies** in robotic systems. This approach achieves **>90% accuracy** in differentiating sensor faults and attacks from noise and fluctuations.
- Designed methods to **classify and detect** physically realizable **adversarial patch** attacks against DNNs. This method demonstrated **80% reduction** in misclassification in computer vision benchmarks.

### Research Intern at Oracle Labs, Vancouver, Canada

Jul 2022 – Dec 2022

- Proposed a pre-training approach to improve **zero-shot performance** of LLMs in code automation tasks.
- Designed an LLM based **recommendation system** that integrates with developer environments to proactively provide ranked and relevant solutions by eliminating the need for manual prompts.
- This work resulted in filing **two US patents** in the area of LLM and recommendation systems.

### Research Engineer at (IAIK) Graz University of Technology, Austria

Jan 2017 – Aug 2018

- Designed a crypto framework for end-to-end confidentiality ([IAIK-JCE](#) extension) in **federated identity management** cloud services. This approach is **used by three services providers** in Germany and Italy.
- Led the efforts in designing approaches for transparent assessment of **GDPR compliance** in cloud services. This work is now used by EuroCloud's StarAudit Certification ([StarAudit](#), [CREDENTIAL](#)).
