## RESEARCH EXPERIENCE

**Doctoral Candidate at the University of British Columbia, Vancouver, Canada** **Sep 2018 – Present**

- Proposed a method for designing **safe Deep-RL** agent that is resilient even under adversarial conditions (faults, attacks) by incorporating temporal logic-based invariants and game-theoretic adversarial training.
- Designed a **robust time series** modeling approach to detect and mitigate sensor anomalies against autonomous vehicles (AV). Work on AV security featured in [EurekaAlert](#), [TechXplore](#), [GlobalNews](#).
- Proposed methods to detect and mitigate physically realizable **adversarial patch** attacks against DNNs. This method demonstrated **80% reduction** in misclassification in computer vision benchmark.

**Research Intern at Oracle Labs, Vancouver, Canada** **Jul 2022 – Dec 2022**

- Proposed a pre-training approach to improve **zero-shot performance** of LLMs in code automation tasks.
- Designed an LLM based **recommendation system** that integrates with developer environments to proactively provide ranked and relevant solutions by eliminating the need for manual prompts.
- This work resulted in filing **two US patents** in the area of LLM and recommendation systems.

**Research Engineer at (IAIK) Graz University of Technology, Austria** **Jan 2017 – Aug 2018**

- Designed a crypto framework for end-to-end confidentiality ([IAIK-JCE](#) extension) in **federated identity management** cloud services. This approach is **used by three services providers** in Germany and Italy.
- Led the efforts in designing approaches for transparent assessment of **GDPR compliance** in cloud services. This work is now used by EuroCloud's StarAudit Certification ([StarAudit](#), [CREDENTIAL](#)).
